अंधश्रद्धा, व्यसनमुक्ती आणि 'पर्यावरण संतुलन' काळाची गरज

The Department of First Year Engineering organised an expert session on **अंधश्रद्धा, व्यसनमुक्ती आणि 'पर्यावरण संतुलन' काळाची गरज** by Mr. M.M. Jagdale. A total of 100 first year engineering students attended the session from 1:30 pm to 02.30 pm. The students were highly motivated by the lecture that shaped them and their thinking into a new direction. How to handle problems related to real life, like superstition, de-addiction and environmental pollution to the students were addressed very well by Mr. M.M. Jagdale which helped the students to identify the paths.

Ever since a long time, we have seen man believe in some kind of power unseen. Even though they can't see it, they feel it is present and working. This is what give rise to superstitions. They are unreasonable and irrational but they still exist all over the world. He said that some superstitions were also created because of social values. As a result, people worship forces of nature for a long time. The Greeks and Pagans used to worship elements of nature in the form of Gods and Goddesses. Same is the case with Indian tradition. People continue to worship the sun, moon, stars, planets, plants and more believing these things have the power to influence our lives.

Also, he shared some examples like ever since a long time till date, people still consider the number 13 to be unlucky. Similarly, salt spilling over the dinner table is also an ill-omen. In India, people consider the black cat crossing the way to be unlucky. Similar is the case of an owl hooting or a dog wailing.

As we all know that excess of anything can be very dangerous, the same way, addiction of any kind can hamper the life quality of an individual. The phrase states that addiction is a family disease as one person uses and the whole family suffers. Firstly, he said that addiction has major health hazards. Intake of anything is bad for

our body, and it does not matter what type of addiction it is, it will always impact the mental and physical health of a person.

Lastly, he discussed on Environment pollution, pollution has become one of the most concerning issues for our planet and mankind. It takes place when pollutants contaminate our environment. In other words, pollution is responsible for disturbing the balance of the ecosystem. Moreover, it impacts our lifestyle severely and also contributes greatly to global warming.
